

VPN Tracker 8

Securely connects Macs with remote networks

The market leading **VPN Tracker 8** is now optimized for OS X Yosemite. VPN Tracker uses the industry standard IPsec protocol and is universally applicable. It supports standard and vendor-specific methods for automatic configuration and authentication. VPN Tracker includes device profiles for more than 300 VPN gateways of the leading manufacturers.

Traffic Control

NEW

VPN Tracker can manage numerous VPN tunnels simultaneously. The new Traffic Control feature makes it possible to in- or exclude entire IP-ranges from VPN tunnels.

Force Traffic for the local subnet

NEW

It's even more convenient to work on a VPN desktop: You can solve common address conflicts between local subnets and remote networks.

Ready for Yosemite

NEW

In order to ensure safe VPN connections for Mac users under Apple's newest operating system, OS X Yosemite, equinux improved the VPN engine and security features of VPN Tracker 8.
