

# VPN to AVM FRITZ!Box using VPN Tracker on OS X

There are two ways of configuring a VPN to your FRITZ!Box:

## 1. FRITZ!Box web admin interface: Internet > Permit Access > VPN

In VPN Tracker, select the device profile FRITZ!Box (VPN User). You'll find the necessary settings on your FRITZ!Box under System > FRITZ!Box Users > your user> Show VPN settings.

## 2. Using the equinux VPN Wizard

The free [VPN Wizard app for OS X](#) creates a configuration file for your FRITZ!Box and for VPN Tracker. You can choose whether to tunnel all Internet traffic through the VPN, or only traffic to the FRITZ!Box LAN network. Optionally, the VPN Wizard can create an iPhone/iPad configuration as well.

## Summary

	1. Web Admin	2. VPN Wizard
FRITZ!Box	FRITZ!OS 06.05 or newer	all VPN capable versions
VPN Tracker	VPN Tracker 8.1 or newer	VPN Tracker 6 or newer
Internet and LAN over VPN	✓	✓
LAN over VPN	✗	✓

We recommend using one of the configurations above when setting up a new VPN.

If you already have a VPN setup that you want to reuse, have more complex requirements, or configuration questions, please [contact our support team](#).

If you don't have VPN Tracker installed yet, you can [download a free 30-day trial](#).
